01

Portfolio purpose: turn a real design pain point into an AI practice pilot

This is not presented as a finished enterprise platform; it is a practical proposal supported by real prompt cases and reusable templates.

WHAT THE ROLE NEEDS

- Identify useful AI opportunities in everyday design work
- Build lightweight workflows, prompts and prototypes
- Support colleagues through training, examples and adoption

THIS PORTFOLIO SHOWS

- A structured SU-to-render workflow based on real examples
- A review method that checks both model consistency and design value
- A pilot toolkit that another designer could use to repeat the process

MY POSITIONING

- Not just prompting for images
- Not claiming a complete deployed platform
- A practical architecture AI workflow proposal with prototype-ready components

Core message: help architects move from individual prompting to a reusable, reviewable AI practice.

02

Prompting is treated as a structured design task

The original prompts use a consistent structure that can be converted into a reusable TaskSpec.

01 Generate what

Rendering type and viewpoint

02 Preserve what

Geometry, camera, structure

03 Overall style

Atmosphere and visual language

04 Material system

Ceiling, floor, facade, furniture

05 Programme and furniture

Functions, counters, seating

06 People and activities

Scale, behaviour, clarity

07 Lighting

Daylight, artificial light, mood

08 Image quality

Photorealism and resolution

Reusable TaskSpec = Base image + Design question + Locked elements + Editable variables + Required programme + Forbidden changes + Validation rules

Raw prompt

Structured fields

Visual TaskSpec

Reviewable output

03

Four SU-to-render cases from the source deck

Each case contains a baseline SU/model image, an AI-generated output and a structured prompt logic.

Case 01 · Circular Atrium Cafe

Interior

Case 02 · Symmetric Atrium Lounge

Interior

Case 03 · Valley Resort Exterior

Exterior

Case 04 · Terracotta Civic Atrium

Interior

Portfolio value: the cases turn prompting from an ad hoc image request into a repeatable architectural AI workflow.

04

Case 01: Circular Atrium Cafe

How can a circular atrium become a calm shared hub while preserving the existing structural frame?

SU BASELINE

AI OUTPUT

Review notes

- Good preservation of circular atrium and main structure
- Furniture and planting make the space more usable
- Needs review for furniture density and generic lounge atmosphere

Prompt strategy

Preserve

- camera angle and composition
- circular layout and spatial proportions
- glass curtain wall, X-bracing, column grid and openings
- no added or removed structure

Edit

- low-saturation mint-green palette
- dark-green perforated metal ceiling with linear lights
- dark-green terrazzo floor
- central coffee counter, planting, leather lounge chairs and round tables
- a few realistic business users

English structured prompt

Generate a realistic interior rendering from the SU screenshot. Strictly preserve the original camera angle, composition, spatial proportions, circular layout, glass curtain wall, X-shaped bracing, column grid and opening relationships. Do not add or remove architectural structure. Use a low-saturation mint-green palette, a dark-green perforated metal ceiling with linear light slots and a dark-green terrazzo floor. Place a central coffee service counter, planting on both sides, brown leather lounge chairs and round tables. Add a small number of business users with realistic scale and clear faces, hands and clothing. Use soft daylight, refined realistic materials, a bright transparent atmosphere, ultra-realistic architectural photography, 4K high resolution.

Review

05

Case 02: Symmetric Atrium Lounge

How can a symmetrical atrium read as a refined public lounge without losing its strong structural identity?

SU BASELINE

AI OUTPUT

Review notes

- Strong match between material system and original geometry
- Symmetry is preserved and presentation quality is high
- Service-counter visibility and activity logic need clearer articulation

Prompt strategy

Preserve

- camera angle and symmetrical composition
- spatial proportions and arched roof
- glass curtain wall, X-bracing and column grid
- no change to opening relationships

Edit

- deep green perforated ceiling with integrated linear lights
- dark green terrazzo floor
- central coffee service counter
- integrated planters, leather chairs and round tables
- daylight with bright transparent atmosphere

English structured prompt

Generate a realistic interior rendering based on the SU screenshot. Strictly preserve the original camera angle, symmetrical composition, spatial proportions, arched roof, glass curtain wall, X-shaped bracing and column grid. Use a dark-green perforated metal ceiling with integrated linear light slots and a dark-green terrazzo floor. Place a central coffee service counter, integrated planting beds on both sides, brown leather lounge chairs and round tables. Add a small number of business users with realistic scale and clear facial features and clothing. Use soft daylight, a bright and transparent atmosphere, refined realistic materials and ultra-realistic architectural photography, 4K high resolution.

TaskSpec

AI Output

Review

Case 03: Valley Resort Exterior

How can the building merge with the valley setting while keeping the original road, water feature and massing intact?

SU BASELINE

AI OUTPUT

Review notes

- The exterior atmosphere successfully turns the model into a place-specific scene
- Water, mountain and terraces support the intended resort narrative
- Must watch for added details that could alter the approved massing

Prompt strategy

Preserve

- original view and composition
- road, pool and crystal installation
- building massing and layered curved outline
- transparent central glass structure

Edit

- warm rough brown stone and large full-height glazing
- terraces with rich cascading planting
- floral planting, pedestrians and warm interior lighting
- realistic water reflections
- soft evening light and calm valley-resort atmosphere

English structured prompt

Generate a realistic architectural rendering based on the SU screenshot. Strictly preserve the original viewpoint, composition, road, water pool, crystal installation, building massing and layered curved outline. Use warm brown rough stone and large areas of full-height glass. Add abundant cascading terrace planting that naturally merges with the mountains on both sides. Keep the central glass building transparent and lightweight. Add flower planting, pedestrians and warm interior lighting. Make the water surface show realistic reflections. Use soft evening natural light, an ecological, calm valley-resort atmosphere, ultra-realistic architectural photography and 4K high resolution.

Case 04: Terracotta Civic Atrium

How can an arched interior become a warm public gathering space while preserving the original vaults and stair sequence?

SU BASELINE

AI OUTPUT

Review notes

- Public programme and terracotta material give the space a stronger identity
- Arched openings and grand stair are well preserved
- Need to ensure market elements do not overfill circulation zones

Prompt strategy

Preserve

- original viewpoint and symmetrical composition
- spatial proportions and arched dome
- central grand stair, side corridors, glass curtain wall and arch openings
- no structural changes

Edit

- warm terracotta textured walls and grey stone floor
- layered planting integrated with the steps
- hanging plants along railings and canopies
- coffee cart, display stalls and casual users
- daylight, tree shadows and warm transparent atmosphere

English structured prompt

Generate a realistic interior rendering based on the SU screenshot. Strictly preserve the original viewpoint, symmetrical composition, spatial proportions, arched dome, central grand stair, side corridors, glass curtain wall and arched openings. Use warm terracotta textured walls and a grey stone floor. Integrate layered planting with the central steps, and add hanging plants along the railings and canopies on both sides. Add a coffee cart, display stalls and a moderate number of casual users with realistic and clear scale. Use natural daylight with tree-shadow projection, a warm transparent spatial atmosphere, refined materials and ultra-realistic architectural photography, 4K high resolution.

08

Proposed lightweight workflow: from SU screenshot to decision memory

This can be prototyped quickly without building the full enterprise platform first.

Key principle: AI can suggest and structure, but the architect confirms constraints, evaluates design value and approves the next step.

Discover

Prototype

Support

Scale

09

Four-page web prototype for the demo video

The prototype is designed for a 2-3 minute workflow demonstration.

Completion status should stay transparent: prompt builder and review logging can be working; image output and automatic diff can remain prototype or planned automation.

10

AI output review: check both model consistency and design value

This is where the workflow becomes architectural instead of just visual.

MODEL CONSISTENCY

- Camera angle and perspective
- Building volume and roof outline
- Columns, stairs, openings and major components
- Road, pool, planting and site relationships
- People, furniture and vehicle scale
- No prohibited structural additions

DESIGN VALUE

- Does it answer the design question?
- Is there a clear spatial action?
- Is user behaviour realistic?
- Is it project-specific rather than generic?
- Is it worth further development or merging?
- What should be kept, changed or rejected?

Pilot Toolkit: make the workflow repeatable by another designer

The toolkit is the practical handover package for a small AI practice pilot.

01

Design Question Card

Used during the pilot run

02

SU Input Checklist

Used during the pilot run

03

Prompt / TaskSpec Template

Used during the pilot run

04

AI Output Review Rubric

Used during the pilot run

05

Error Taxonomy

Used for adoption and reporting

06

One-page User Guide

Used for adoption and reporting

07

User Feedback Form

Used for adoption and reporting

08

Pilot Result Sheet

Used for adoption and reporting

Goal: if a second designer can repeat the workflow using the toolkit, the project has moved from a personal AI trick to a team practice.

Pilot Toolkit sample: Design Question Card

A single-page template to prevent prompt-first image generation.

Project	Visitor Reception Centre
Stage	Concept / schematic design
Current design problem	The atrium has strong geometry, but the spatial hierarchy between service, dining and informal interaction needs to be clearer.
Locked elements	Original camera angle, circular atrium, skylight, columns, stairs and two-storey relationship.
Editable variables	Service counter, furniture, planting, material expression, lighting and user activity.
Evaluation criteria	Geometry preservation, clear spatial action, realistic behaviour, project-specific identity and potential for further development.

13

Pilot Toolkit sample: TaskSpec and review templates

These templates turn the method into something colleagues can use and evaluate.

PROMPT / TASKSPEC

- Base image and view ID
- Design question
- Locked elements
- Editable variables
- Required programme
- Forbidden changes
- Validation rules

REVIEW RUBRIC

- Pass / Review / Block for model consistency
- Accept / Partially accept / Reject for design decision
- Keep / Change / Next task for iteration

ERROR TAXONOMY

- G01 geometry changed
- S01 site element misplaced
- P01 people or vehicle scale wrong
- D01 generic visual output
- D02 design logic invalid

14

Pilot plan: make it a people-facing AI practice, not only a prototype

The role of the consultant is to help colleagues understand, test and adopt the workflow.

Discover

Interview 3-5 designers, identify repeated tasks and friction points

Prototype

Run one real project through the SU visual validation workflow

Support

30-minute training, office hour, one-page guide and feedback form

Scale

Turn the best workflow into a reusable team guide and expand to a second designer

MVP success: 1 real project completed, at least 1 AI direction enters the next round, SU output is reviewable, and a second designer can repeat the workflow.

15

My role: connect architecture, AI workflow and team adoption

This portfolio demonstrates planning capability plus real prompting evidence and prototype-ready tooling.

I CAN LEAD

- Business workflow diagnosis
- AI opportunity mapping
- Prompt and TaskSpec framework
- Pilot toolkit design
- Portfolio and demo storytelling

I WOULD COLLABORATE ON

- Production web interface
- Automated image generation integration
- Computer vision diff automation
- SketchUp plugin or file bridge
- Enterprise security and deployment

NEXT STEP

- Use this toolkit in one real project
- Record one demo video
- Ask a second designer to repeat it
- Compare with the current manual baseline
- Decide whether to extend to InDesign, SU actions or Rhino/GH

Final message: I help architects move AI from individual image prompting into a practical, reviewable and reusable team workflow.
