01

01 · Design Question Card

Use before generating images. The goal is to define a design problem, not only a visual style.

Project	Visitor Reception Centre
Stage	Concept / schematic design
View	Interior Atrium 02
Current problem	The atrium needs a clearer relationship between service, dining and informal interaction.
Design goal	Create a shared central space without changing the existing structure.
Locked elements	Camera angle, circular atrium, skylight, columns, stairs, two-storey relationship.
Editable variables	Furniture, service counter, planting, materials, lighting and user activity.
Evaluation criteria	Preserve geometry, clarify hierarchy, avoid generic styling and create a direction worth further development.

02

02 · SU Input Checklist

Standardise the input so that outputs can be reviewed consistently.

REQUIRED INPUTS

- Original SU screenshot
- Hidden-line screenshot
- Material view screenshot
- Camera/view name
- Model version
- Locked areas
- Editable areas
- Reference images
- Project description

QUALITY CHECK

- Is the screenshot high enough resolution?
- Are key structures visible?
- Are locked elements clearly described?
- Are site relationships visible?
- Has the architect confirmed the constraints?
- Is the intended output type clear?

03

03 · Prompt / TaskSpec Template

Convert a long prompt into reusable fields.

Output type	Base image / view ID	Design question
Locked elements	Editable variables	Required programme
Material direction	People and activity	Lighting
Image quality	Forbidden changes	Validation rules

04

04 · AI Output Review Rubric

Separate model consistency from design value.

MODEL CONSISTENCY

- Camera angle: Pass / Review / Block
- Volume and structure: Pass / Review / Block
- Openings and components: Pass / Review / Block
- Site elements: Pass / Review / Block
- People and object scale: Pass / Review / Block

DESIGN VALUE

- Solves design question: Yes / Partly / No
- Spatial strategy: Clear / Weak / None
- Project specificity: Strong / Medium / Generic
- Decision: Accept / Partially accept / Reject
- Next task: Keep / Change / Re-test

05 · Error Taxonomy

Turn repeated mistakes into reusable review labels.

G01

Geometry changed

Added floors, altered massing or changed roof

C01

Component loss

Columns, stairs or openings disappeared

P01

Scale error

People, vehicles or furniture too large/small

D02

Design logic invalid

Beautiful image but weak spatial reasoning

G02

View drift

Camera or perspective changed

S01

Site misplaced

Grass, water, road or parking in wrong position

D01

Generic output

Only style, planting or lighting changed

M01

Material misplaced

Material applied to the wrong component

06

06 · One-page User Guide + Feedback Form

Make the pilot easy for colleagues to try.

ONE-PAGE USER GUIDE

- Choose one project view
- Fill the Design Question Card
- Confirm locked and editable elements
- Generate or select a direction
- Run the structured prompt
- Review with the rubric
- Record keep/change/reject
- Create the next task

FEEDBACK FORM

- Which step was most useful?
- Where did the workflow feel unclear?
- Did it produce a direction worth discussing?
- Did it reduce rework or improve confidence?
- Would you use it again?
- What should be improved first?
